

EASYPRO[®]

TEMPORARY SURFACE PROTECTION

Optimized for an even easier and sustainable processing

EASYPRO®

TEMPORARY SURFACE PROTECTION

EASYPRO® is a revolutionary and unique temporary surface protection developed and offered exclusively by Saint-Gobain Glass. Deposited on to-be-tempered coated glass, it delivers effective protection against mechanical damage as well as ageing, during transport and processing, from deposition of the coating until tempering. During tempering, EASYPRO® simply burns off without leaving any residue inside or outside the furnace and without any negative impact on the environment or personal health and safety.

FOR THE EASE OF PROCESSING OF COATED GLASS

Developed for the ease of processing, EASYPRO® offers flexibility and productivity.

- it reduces surface scratches and remakes
- it increases shelf life in stock or after cutting
- it eliminates time to unseal the pack
- it optimizes tempering cycles
- it improves tempering quality

FOR THE BEAUTY OF PROJECTS

EASYPRO® is an ally for ambitious projects and preserve aesthetic of tempered coated glass.

- it improves the optical quality of heat-treated glass
- it helps to deliver optimal aesthetics for most demanding projects (e.g. with impressive overlength glass)

FOR A MORE SUSTAINABLE PROCESSING

EASYPRO® is a sustainable innovation, minimizing waste and saving energy.

- it reduces the amount of packaging and avoid plastic waste
- it reduces the scraps and damages and thus the need to produce new glazing
- it offers energy saving benefits by allowing reduced temperature levels in the furnace.

EASYPRO® protects Saint-Gobain Glass to-be-tempered coatings on PLANICLEAR®, DIAMANT® or ORAÉ®.

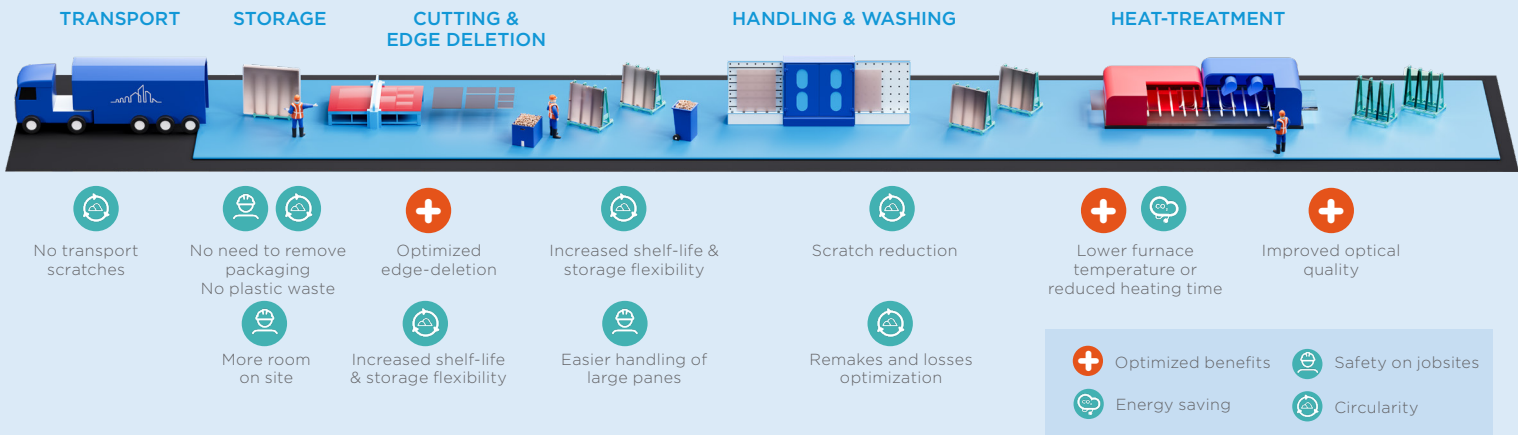

It is on standard on **COOL-LITE® XTREME II, SKN II and COOL-LITE® KN II**.

EASYPRO® is also available on demand on **PLANITHERM® II** glass.

Contact us for individual inquiries or coating availability on the different substrates.

OPTIMIZED FOR AN EVEN EASIER AND SUSTAINABLE PROCESSING

Building on the large and positive experience of several years on EASYPRO®, Saint-Gobain Glass has been able to accumulate data and experience, and today offers an optimized version of EASYPRO®

R&D work, investment in our production and years of experience of our industrial process allow us to optimize our EASYPRO® solution with the aim to offer product and services which meet the current needs and expectations of our customers.

This optimization offers easier processing with the same performance and service to our customers and allows possible further optimizations of the processing (depending on the equipment).
