

MASTER-SOFT®

Description

MASTER-SOFT is a tactile material that catches one's eye and pleases the touch. The glass has a soft texture, with a quilted pattern and a touch of fine grain. It transmits a blur in background, becoming blurred as the body moves away.

APPLICATION

Light screen, internal structure, furniture, MASTER-SOFT is all at the same time. Its structure is perfect for light interplay and contrasts. It is ideal for home use, offices, shops, hotels and restaurants. Its applications are limitless: furniture, partitions, shower screens, doors, windows ...

PROCESSING

MASTERGLASS suits many processing types. It can be: curved or edgeworked; toughened or laminated for safety purposes; lacquered (on the smooth face); incorporated in enhanced thermal insulation double-glazed units for comfort.

ADVANTAGE

- **Modern design:** a matte texture, soft and flexible, structured with two diagonals. A state-of-the-art design.
- **Maximum light:** while maintaining privacy.
- **Optional safety:** MASTER-SOFT, as with all MASTERGLASS glass, can be toughened to ensure a better level of safety and comply with current regulations.

Installation

MASTERGLASS must be installed according to current regulations and standards. The pattern on MASTERGLASS runs in one direction like with all textured glass. The cut sheets must be placed side by side with the pattern on the glass running in the same direction, in order to obtain a uniform appearance. When continuity of pattern is required, particular care must be taken in cutting the glass.

RANGE

Dimensions	3210*2000	3200*2000	3300*2040	3300*2040
Thickness (mm)	4	6	8	10
MASTER-SOFT	X		X	
MASTER-CARRE	X	X	X	X
