

WAVELINE® FLUID

Description

FLUID is characterised by a contemporary and modern design. With its gentle, wave-like flow it follows the trend for a dynamic and natural appearance. The design of FLUID is inspired by the motion of flowing water and imparts a vivid impression that delivers unusual glimpses and insights through the glass. This new form of glass structure also satisfies the needs of customers for flatter and more modern glass structures.

APPLICATION

FLUID is perfect for:

- glass partition walls
- doors
- shower partitions
- insulating glazing

It gives rooms character and encourages designers to experiment. FLUID can be fitted either horizontally or vertically and achieves a different effect in each case.

RANGE

Thicknesses : 4, 6, 8 mm

Dimensions : 3210x2000 mm

PROCESSING

It can be processed into safety glass and can display a sophisticated presence with a laquered or printed

backside. With FLUID, architects and designers also have access to an exceptional design medium for façades.
