

First EPD supplier worldwide

First EPD supplier worldwide

SAINT-GOBAIN delivers transparency documentation to prove the actual sustainability level of each product.

We give our clients Environmental Product Statements (EPDs) of our glazing. Based on the Life Cycle Analysis (LCA), this report explains in detail the environmental impact of our flat glass, from extraction of raw materials to manufacturing and distribution (called "cradle-to-grave"). The declaration is made in compliance with international standards (EN 15804 and ISO 14025 standards) and is third-party verified, ensuring accuracy and reliability of the data.

By publishing EPDs, Saint-Gobain helps its customers including architects, engineering firms and general contractors whose projects seek to achieve LEED, BREEAM or DGNB green building label.

Furthermore, Saint-Gobain enables them to choose the best product by analyzing data – as the technique is scientifically and globally accepted – and also to carry out the Life Cycle Analysis at construction level with all products (concrete, glass, metal ...).

Your partner for sustainable construction

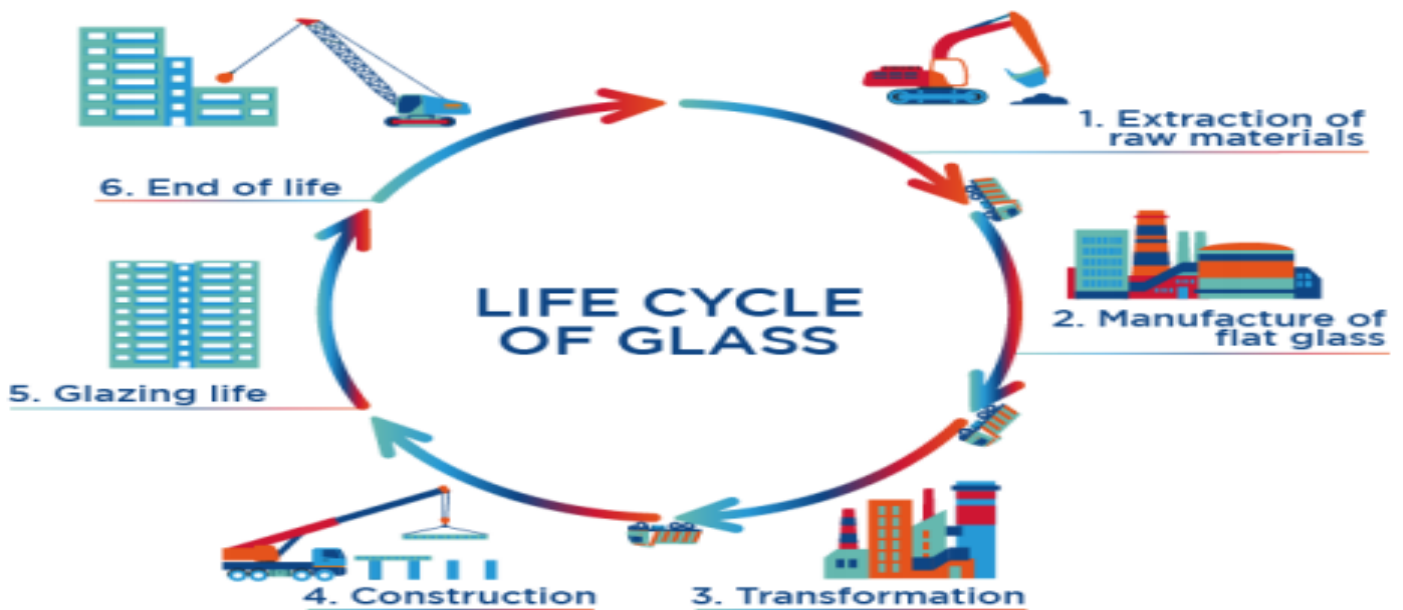

Saint-Gobain is the world's first glass producer to have conducted LCAs in 2011 and now has the most EPDs available on the market that cover 20 product solutions and more than 200 glazing configurations.

Our EPD are verified by a third-party and can be downloaded on the [Environdec](#) and [Saint-Gobain Green Buildings Website](#)

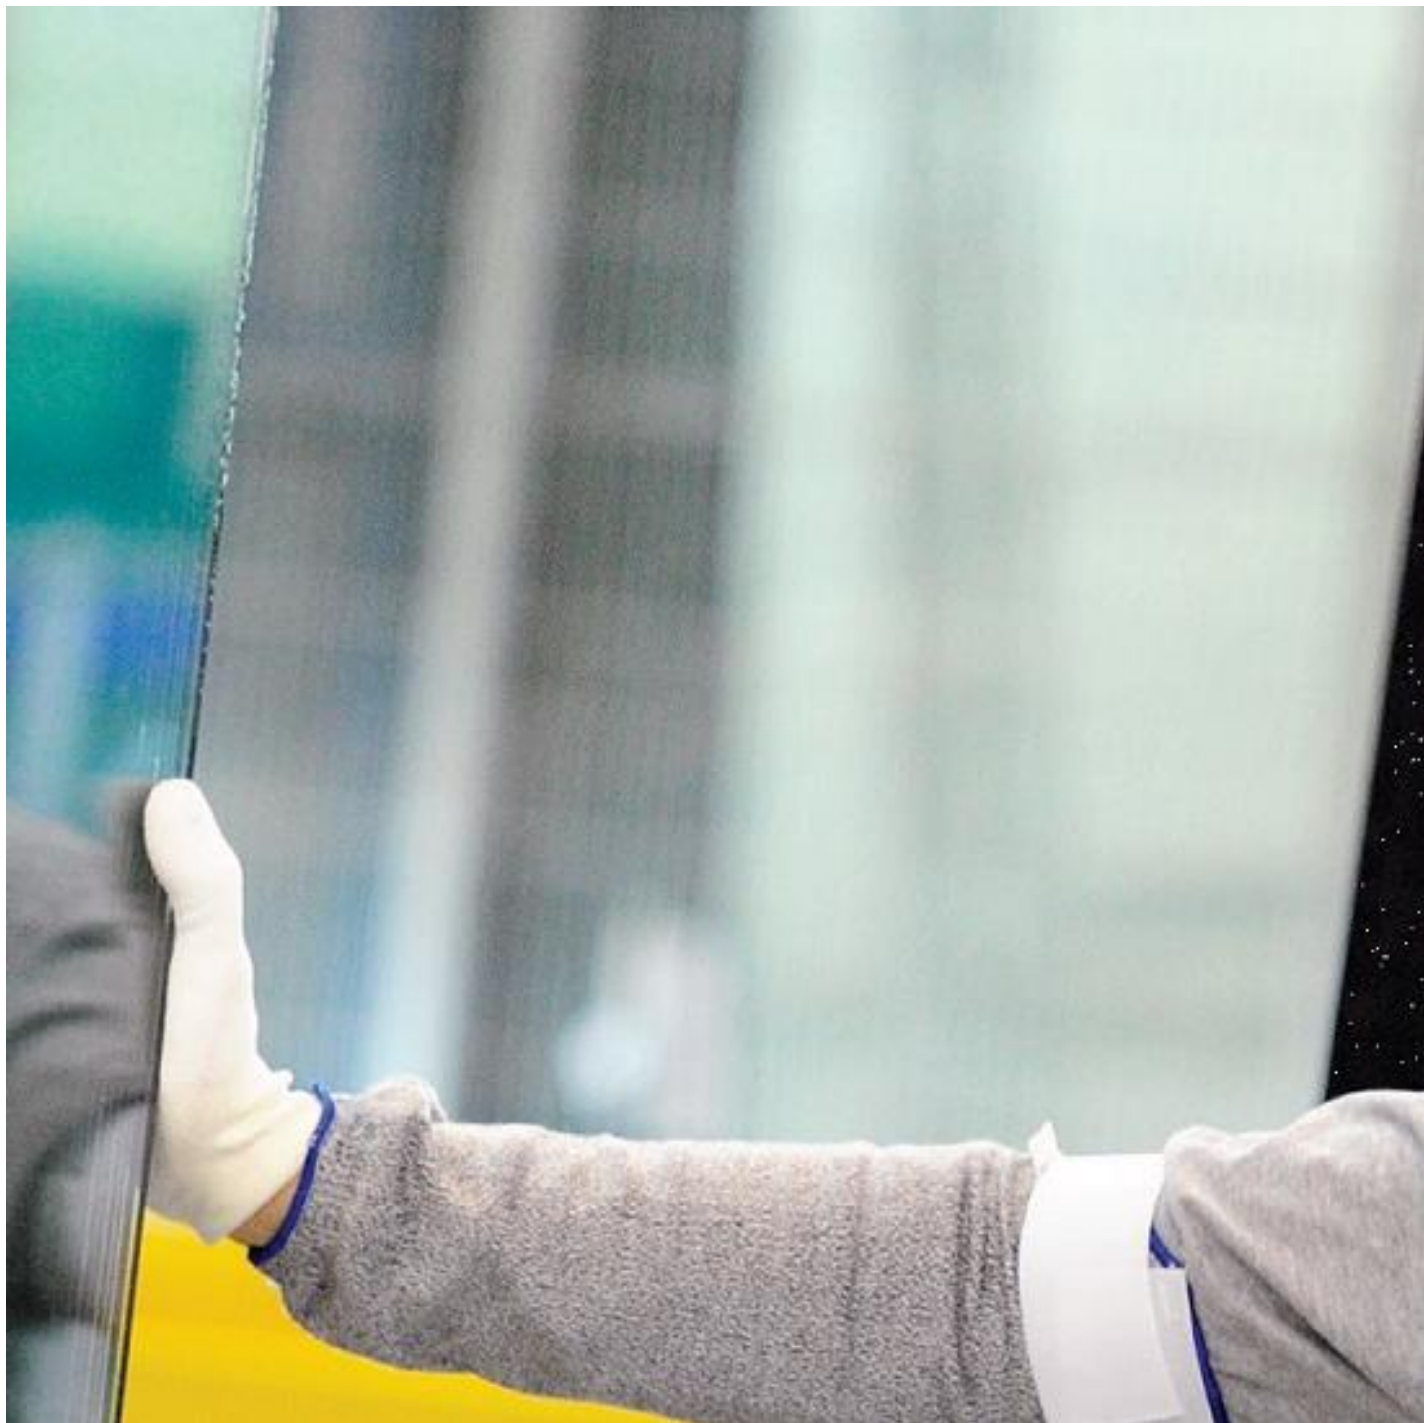

An Eco-Innovation driver

Saint-Gobain's strategy is focused on knowledge and reduction of the environmental impact of its glazing solutions over their entire life cycle.

Through implementing LCA and delivering EPD, we considered the environmental impacts affecting climate change, human health, eco-systems (biodiversity), non-renewable resources ... LCA methodology offers a good picture of the impacts of goods in order to quickly recognize the strengths and disadvantages to guide the roadmap for eco-innovation.
